SUTORÝ K. 2006: Material of type character in the Münch-Bellinghausen collection in the Moravian Museum, Brno (BRNM). 5. Karel Bořivoj Presl. *Acta Musei Moraviae, Scientiae biologicae* (Brno) **91:** 165–179. – Forty-two specimens documenting new or previously unpublished names of plants collected by Karel Bořivoj Presl in Sicily deposited in the collection of Münch-Bellinghausen are listed and commented upon. Two not generally known announcements of his exsiccates are mentioned.

Key words. C. Presl, Flora Sicula, herbarium material

Introduction

The Münch-Bellinghausen collection contains a number of original specimens collected by various botanists in the first four decades of the nineteenth century (SUTORÝ 1986). This contribution is the fifth in a series following on from the evaluation of the specimens by W. Besser (SUTORÝ & BUZUNOVA 2000), F. P. A. Waldstein and P. Kitaibel (SUTORÝ 2000), D. H. Hoppe (SUTORÝ 2003) and A. Rochel (SUTORÝ 2004).

Karel Bořivoj Presl (*17.2.1794 Prague – † 2.10.1852 Prague)

The famous Czech botanist Karel Bořivoj Presl made a collection trip to Sicily in the year 1817. According to his diary, preserved in Archive of the National Museum in Prague, he collected in the neighbourhoods of Messina and Milazzo in March and the environs of Palermo from 25th March until July 1817. Arising out of this was not only the publication of the first volume of "Flora Sicula" but also a set of dried plants offered for sale. With perhaps some exceptions, this is all this material present in the collection studied here. In the list below, only authentic material associated with Presl's names is cited. This set was offered in a printed leaflet as late as 1818 (Presl 1818). There is a certain amount of doubt about the date of publication. Presl wrote it as a "Medicinae doctor" but according to his biography (HOFFMANNOVÁ 1973) he acquired this qualification only on 9th December 1818. According to the notes on the labels in the Münch-Bellinghausen collection, the first plants from this set were ordered for the collection of the year 1818, which means the year after the trip; the majority, of course, came in the following year, 1819. This is the first printed appearance of Presl's names of Sicilian plants, although it lacks descriptions. It is not likely that Münch-Bellinghausen had another notice about the issue of this set. The offer was published for a second time,

in almost unchanged form, in 1821 (Presl 1821). The collection was offered in five parts, each with 50 plants. The hand-written labels are modest, giving only name, ecological characteristic, time of flowering and life form. All further information was have been given later in "Flora Sicula". Its publication was anticipated in the foreword as "künftige Osterrmesse" – the following Easter. As we know, the first and only volume of this unfinished work was published eight years later, in 1826. Presl's further works, which validate some of the names, are "Graminae Siculae. Dissertacio [1)]" (1818, December) (omitted in Stafleu & Cowan 1983), later issued as "Cyperaceae et Graminae Siculae" (1820) and "Deliciae pragenses" (1822).

The original herbarium material from C. B. Presl is deposited in PRC (Kříša 1995) and PR (Stafleu & Cowan 1983). However, to judge by differences in the labels, it is unlikely that this material is identical with the plants distributed on a commercial basis. The labels in our collection correspond perfectly with the description given by Presl (Presl 1818, 1821). The presence of Presl's plants with names cited in PRC is given in the list under "duplicates", although this need not necessarily be identical material.
